

Installing / Accessing MongoDB

To install MongoDB on your laptop follow this step-by-step guide here:

<http://stackoverflow.com/questions/20796714/what-is-the-way-to-start-mongo-db-from-windows-7-64-bit>

To use the DIT MongoDB instance, log into **socappsrv2.ict.ad.dit.ie**

You can connect to the shell by typing **mongo** with your login options.

For each student there is a database created with the name and password equal to the student number (all small letters).

Command to login:

```
mongo -u <username> -p <password> localhost:27017/admin
```

where username = password = your student number (all small letters)

You only read/write on your database only.
